Sequences AAU29024-AAU29128 represent PRO polypeptides of the invention.
The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammal Mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human blood, when contexted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also susceptibility to tumour development, particularly adrenal, lung, colon, breast, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids subjects. The oligonucleotide probes specific for the PRO nucleic acids subjects. The oligonucleotide probes specific for the PRO nucleic acids and used for genetic analysis of individuals with genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of tumours, such as prostate and breast tumours, in mammals and to screen for modulators of the compounds -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gurney AL; Sequence

```
The present sequence is human leucine-rich repeat (LRR) protein.

LRR protein is involved in protein recognition, cell adhesion,
development, signal transduction, DNA repair, recombination, immune
responses and transcription. LRR DNA and protein are useful for treating,
preventing haemophilia, bleeding disorders (Bernard-Soulier syndrome),
myocardial infarction, thrombosis, atherosclerosis, glomerular diseases,
angioplasty-related restenosis, viral infections, melanomas,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel leucine-rich repeat protein-like polypeptides and polynucleotides for diagnosing, treating bleeding disorders, myocardial infarction, atherosclerosis, angioplasty-related restenosis and glomerular diseases
                                                                                                                                                                                                                                                                                                                    378..391

```
The present sequence is human leucine-rich repeat (LRR) protein.

C LRR protein is involved in protein recognition, cell adhesion,
development, signal transduction. DNR arepair, recombination, immune
responses and transcription. LRR DNR and protein are useful for treating,
proventing haemophilia, bleeding disorders (Bernard-Souler syndrome),
mycoradial infarction, thrombosis, atherosolerosis, glomerular diseases,
angioplasty-related restenosis, viral infections, melanomas,
immunological disorders (rheumatoid arthritis, multiple sclerosis,
systemic lupus erythematosus, inflammatory bowel disease,
periodontitis); wound healing, burns, ulcers, incisions and cancer.
C LRR is also useful for proliferation of neural cells and nerve
regeneration, for treating peripheral nervous system diseases, duntington's
crepencation, for treating peripheral nervous system diseases, central
nervous system diseases (Alzheimer's, Parkinson's disease, Huntington's
disease, amyotrophic lateral sclerosis and Shy-Drager syndrome);
compensation and traumatic diseases (stroke); HVV, lung or liver fibrosis,
crepenoxacular diseases (stroke); HVV, lung or liver fibrosis,
irritation associated with infection (septic shock, sepsis or systemic
corebrovas syndrome (SIRS)), ischemilar-peperfusion injury,
endotoxin lethality, arthritis, coupe pencentitis, endotoxin shock,
chronic inflammatory arthritis, coupe pencentitis, endotoxin shock,
chronic inflammatory arthritis, pancreatic cell damage from diseases,
compensation to the seases, other autoimmune diseases or inflammatory diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel leucine-rich repeat protein-like polypeptides and polynucleotides for diagnosing, treating bleeding disorders, myocardial infarction, atherosclerosis, angioplasty-related restenosis and glomerular diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                        Liu C;

The invention relates to isolated polynucleotide (I) and probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The cand gene mapping are also used in diagnostics as expressed sequence tags of relatifying expressed gene: (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human cald sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO cat fip. wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                      Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.

Sequences AAU29024-AAU29328 represent PRO polypeptides of the invention.

The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also susceptibility to tumour development, particularly adrenal, lung, colon, breast, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders.
                                                                                                                                                                                                                                                                   Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of tumours, such as prostate and breast tumours, in mammals and to screen for modulators of the compounds -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cardiovascular disorder; systemic infection; autoimmune disease, asthma; rhinitis; chronic obstructive pulmonary disease; emphysema; diabetes; inflammatory bowel disease; ulcerative collitis; Crohn's disease; TLR9-A; rheumatoid arthritis; osteoarthritis; psoriasis; Alzheimer's disease; atherosclerosis; Multiple Sclerosis; septic shock syndrome.

   The present sequence represents human Toll-like receptor (TLR9) variant, designated TLR9-A. The Toll-like receptor protein has immunomodulatory activity, and may be used in vaccines. TLR9 is useful to identify a compound which modulates Toll-like receptor activity. Such compounds are useful to treat an inflammatory or cardiovascular disorder, systemic infection or autoimmune disease that is responsive to Toll-like receptor modulation, for example viral, fungal or bacterial infection, asthma. The relative collitis or Crohn's disease, inflammatory bowel disease such as ulcertive pulmonary disease, emphysema, inflammatory arthritis, osteoarthritis, psorlasis, Alzheimer's disease, rheumatoid arthritis, osteoarthritis, psorlasis, Alzheimer's disease, atherosclerosis, Multiple Sclerosis, diabetes or septic shock syndrome associated with systemic infection involving gram positive or gram negative bacteria. They may also be used to manufacture medicament for the treatment of an immune or inflammatory disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; Toll-like receptor; TLR9; vaccine; inflammatory disorder; cardiovascular disorder; systemic infection; autoimmune disease; asthma; rhinittis; chronic obstructive pulmonary disease; emphysema; diabetes; inflammatory bowel disease; ulcerative colitis; Crohn's disease; rheumatoid arthritis; osteoarthritis; psoriasis; Alzheimer's disease; atherosclerosis; Multiple Sclerosis; septic shock syndrome.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
```

```
The present sequence represents a human Toll-like receptor polypeptide, activity, and may be used in vaccines. TLR9 is useful to identify a activity, and may be used in vaccines. TLR9 is useful to identify a compound which modulates Toll-like receptor activity. Such compounds are useful to treat an inflammatory or cardiovascular disorder, systemic infection or autoimmune disease that is responsive to Toll-like receptor modulation, for example viral, fungal or bacterial infection, asthma, rinitis, chronic obstructive pulmonary disease, emphysema, inflammatory bowel disease such as ulcerative colitis or Crohn's disease, rheumatoid arthritis, osteoarthritis, posciasis, Alzheimer's disease, and atherosclerosis, multiple Sclerosis, diabetes or septic shock syndrome associated with systemic infection involving gram positive or gram negative bacteria. They may also be used to manufacture medicament for the treatment of an immune or inflammatory disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DNAX toll-like receptor; DTLR; Drosophila toll receptor; IL-1 receptor; interleukin 1 receptor; phosphate metabolism; innate immunity response; modulate inflammatory function; morphological effect; immunological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                         An isolated Toll-like receptor polypeptide useful for the treatment or diagnosis of disorders including inflammatory or cardiovascular disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                seq_name: /SIDS1/gcgdata/geneseq/geneseqp-embl/AA1999.DAT:AAW86356

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         to alter phosphate metabolism, to modulate inflammatory function, innate immunity responses or morphological effects. The DTLR proteins can be used in the treatment of conditions exhibiting abnormal expression of the receptors of their ligands. These abnormalities are typically manifested by immunological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention specifically describes human DNAX toll-like receptors 2 to 10 (DTLR2-10). The present sequence is partial human DLR7 given in the present invention. Also described are: (1) a fusion protein comprising a DTLR protein or peptide; (2) a binding compound, preferably an antibody or antibody fragment which specifically binds to a DTLR protein or peptide; (3) a nucleic acid encoding a DTLR protein or peptide; (4) an expression vector comprising the nucleic acid of (3); and (5) a host cell comprising the vector of (4). The host cell of (5) and each of the DTLR proteins can be used to produce the DTLR proteins. The DTLR proteins can be used to also the protein of the DTLR proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              dermatological; immunosuppressive; antiinflammatory; anti-HIV; immunostimulant; ytostatic; cardiant; vascular; anti-angiogenic; ophthalmological; neuroprotectant; nootropic; anticonvulsant; vulnerary; antialzheimers; antiparkinsonian; antimicrobial; immune disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      muitiple sclerosis; systemic lupus erythematosus; HIV; infection; hyperproliferative disorder; cancer; Gaucher's disease; wound healing; cardiovascular disease, Scimitar syndrome; Chaga's cardiomyopathy; coronary arteriosclerosis; angiogenic disorder; diabetic retinopathy; corneal graft neovascularisation; neurological disorder; regeneration; Huntington's chorea; Alzheimer's disease; Parkinson's disease;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
```

```
The polynucleotide sequences given in AAB64882 to AAB64930. AAB64931 to human secreted proteins given in AAB64882 to AAB64930. AAB64931 to AAB64991 represent human secreted polypeptide sequences and proteins human secreted proteins have activities based on the present invention. Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Examples of activities include: and cells the genes are expressed in. Examples of activities include: and cells the genes are expressed in. Examples of activities include: and infinite antiacropial; anti-angiogenic; ophthalmological; cardiant; vascular; antimicrobial; anti-angiogenic; ophthalmological. neuroprotectant; anticonvulsant; noctropic; antialzheimers; antiparkinsonian; and vulnerary. The polynucleotides and polypeptides can be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. Disorders that may be prevented, diagnosed and/or treated by the above methods include immune diagnorders (e.g. multiple sclerosis, systemic lupus errythematosus and human immuno-deficiency virus (HIV) infections), hyperproliferative clisorders (e.g. cancers and Gaucher's disease), cardiovascular diseases (e.g. scimitar syndrome, Chaga's cardiomyopathy and coronary arteriosclerosis), angiogenic disorders (e.g. corneal graft necessal and diabetic retinopathy), neurological disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's disease), infectious diseases and/or for promoting wound healing, regeneration and /or chemotaxis. AAF33204 to AAF33212 and AAB64881 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acids encoding 49 human secreted polypeptides, useful for preventing, diagnosing and/or treating e.g. cancers, Parkinson's disease and diabetic retinopathy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    seq_name: /SIDS1/gcgdata/geneseq/geneseqp-emb1/AA2001.DAT:AAU14800

                                                         Mainty95-AAU14973 represent the amino acid sequences of novel bone marrow-derived polypeptides. The proteins may exhibit e.g., cytokine or stem cell growth factor activity and may be useful for re-engineering damaged or diseased tissues, producing large quantities of human cells to treat Parkinson's, Alzheimer's and other neurodegenerative diseases, wound healing, immune system stimulation or suppression, treating autoimmune diseases, and cancer. The corresponding nucleic acid sequences can be used to express recombinant protein for analysis, characterisation or therapeutic use; as markers for tissues in which the corresponding protein is preferentially expressed; as a molecular weight marker on gels; as chromosome markers or tags; as probes to hybridise and discover novel; related DNA sequences; as a source of information to derive polymerase chain reaction (PCR) primers; for selecting and making oligomers for attachment to a 'gene chip' or other support; to raise antigen to raise anti-DNA antibodies or elicit another immune response. The proteins may be also used as a nutritional source.
                                                                        Bone marrow; immunosuppressive; immunostimulant; cytostatic; vulnerary; nootropic; neuroprotective; therapeutic; antigenic; nutritional source; cytokine; stem cell growth factor; tissue regeneration: cancer; Parkinson's disease; Alzheimer's disease; neurodegenerative disorder; wound healing; immune system; autoimmune disease.

The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA21535-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the hypertension, cardiac arrhythmias and congenital heart disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the vipo int/pub/published_pct_sequences.
                                                                                                                                                                          Protein #5026 encoded by probe for measuring heart cell gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Single exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      seq_name: /SIDS1/gcgdata/geneseq/genesegp-embl/AA2001.DAT:AAM31141

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 27-APR-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           28-APR-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  29-APR-1998
 The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                        Peptide #5178 encoded by probe for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                     Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human placenta -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes secreted and transmembrane polypeptides and their polynucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, concers and cellular adhesion Ax234338, and AAX41685 to AAX4174 represent polynucleotide and polypeptide sequence given in the exemplification of the present

```
This is the amino acid sequence of PRO286, a novel human homologue of Drosophila Toll protein, that acts as a pathogen pattern conserved molecular structures present on microcyanisms. The sequence was deduced from isolated cDNA clone DNA2663-1154 (ATCC 209386) (see AAX58296). The invention provides a novel cDNA clones that encode novel human Toll polypeptides PRO285 (see AAY05868). It also provides specific antibodies and chimeric and least scomprising a PRO285, PRO286 or PRO358 polypeptide, or a transmembrane domain-deleted or inactivated variant, fused to a heterologous amino acid sequence, such as an epitope tag or immunoglobulin For region. Being homologues of Drosophila Toll protein, the 3 human proteins are likely to be involved in adaptive immunity, particularly inflammation, septic shock, and response to the proteins in diseases aggravated by the immune response, such as diabetes, amyotrophic lateral sclerosis, cancer, rheumatoid arthritis and ulcers. The PRO polypeptides are used to identify cother proteins involved in Toll-mediated signal transduction (e.g. cher proteins involved in Toll-mediated signal transduction (e.g. cher proteins antibodies. Antibodies specific for the PRO polypeptides (or for the Known receptor TLR-2) are used to treat septic shock
                                                                                                                                                                                                                                                                                                                                                                                                                                                            New human Toll-like receptors that recognize microbial structures
                                                                                                                                                                                                                                                                                                                                                                            ĸ

```
sequence tag) sequences which encode secreted or transmembrane PRO polypeptides. The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bioactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to XIII the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bioactive molecules to cells. AAC78600 to AAC78677 represent PCR primers and probes used in the isolation of the PRO polynucleotide sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel PRO polypeptides and polynucleotides used in detection methods, to target bioactive molecules to specific cells, and to modulate cellular activities -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                KP, Botstein D, Desnoyers L, Eaton DL;

The peptide corresponds to residues 81-95 of the N-terminus of gyroalich, a water sol. proteolytic fragment of GPID alpha. It may be linked to a second peptide from the 45 kD N-terminal tryptic fragment of GPID alpha. The peptide inhibits binding of vWF to GPID. It can be used to inhibit activation, aggregation and/or adhesion of platelets, esp. for inhibition of thrombosis. see also AAR13128-R1318.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GPIb alpha peptide fragment – inhibits binding of von Willebrand factor to platelet membrane glyco-protein Ib, useful in treating
                                                                                                                                                                                                                                                                                                                            Willebrand factor; vWF; platelet membrane glycoprotein Ib;

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM36642-AAM42213) with noctropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence data for this patent did not form part of the printed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAC77607 to AAC7848 encode the human cancer associated proteins given
in AAB43398 to AAB44239. The proteins can have activities based on the
tissues and cells the genes are expressed in. Example of activities
cliclude: cytostatic: proliferative; vulnerary: immunomodulator;
antidiabetic: antiasthmatic: antimalergic: antibacterial: antiviral;
cantidiabetic: neuroprotective; cardiant; thrombolytic: coagulant;
cantinflammatory: antipyroid: antipalergic: antibacterial: antiviral;
dermatological: neuroprotective; cardiant; thrombolytic: coagulant;
cootropic: vasotropic; antipsoriatic and antianglogenic. The
polynucleotides and polypeptides can be used for preventing, treating or
cootropic; polypeptides and diagnosing pathological conditions.
Co polynucleotides, polypeptides, antibodies, agonists and antagonists from
the present invention may be used to treat immune disorders by activating
cor inhibiting the proliferation, differentiation or mobilisation of
immune cells, to treat disorders of haematopolatic cells, autofimmune
disorders, allergic reactions, graft versus host disease and organ
rejection, modulate haemostatic or thrombolytic activity, modulate
inflammation, cancers, cardiovascular disorders, neurological disease and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          18-JUN-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       .6-JUN-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                18-JUN-
                                                                                                                                                                                                                  ANY94899 to AAY94990, isolated from human sectored proteins given in AAY94899 to AAY94990, isolated from human adult brain, adult thyroid, adult retina, foetal carcinoma, adult blood, adult neural, foetal kidney, adult retina, foetal carcinoma, adult blood, adult neural, foetal kidney, contain adult thymus, foetal placenta, adult uterus, adult tumour, and adult bladder, cDNA libraries. The polymucleotides and proteins are predicted to have blological activities which would make them suitable of for treating, preventing or ameliorating medical conditions in humans and animals. The polynucleotides can be used as markers for tissues in which the protein is preferentially expressed, as molecular weight of markers on Southern gals, and as chromosome markers or tags to identify chromosomes or to map gene positions. The proteins can be used in the treatment of immune deficiencies and disorders, such as severe combined immunedeficiency (SCID), as well as viral, bacterial, fungal and other infections. These infections include human immunodeficiency virus (HIV), hepatitis, herpesviruses, mycobacteria, Leismania spp., malaria and candidasis. The proteins can be used to treat autoimmune disorders such as connective tissue disease, multiple sclerosis, systemic lupus candidasis, rheumatoid arthitis, autoimmune thinamatory eye disease. The proteins can also be used to treat allergic conditions, such asthma. AAA16698 to AAA16774 represent cyrobac for the human secreted proteins from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                           Active fragments of decorin (full-length coding sequence AAO50046) were generated by PCR and fused to Maltose Binding Protein. The resulting fusion proteins were useful for inhibiting the activity of a cell regulatory factor, esp. TGF-beta, and hence for treating conditions associated with over-activity of the growth factor such

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                           activity
   The polynucleotide sequences given in AAF33213 to AAF33261 encode the human secreted proteins given in AAB64882 to AAB64930. AAB64931 to AAB64931 represent human secreted polypeptide sequences and proteins homologous to them, which are given in the exemplification of the proteins have activities based on the tissues can dealls the genes are expressed in. Examples of activities include: Innvention. Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Examples of activities include: Immunomodulatory; antisclerotic; dermatological; immunosuppressive; antinflammatory; anti-HIV; immunostimulant; cytostatic; cardiant; cardimicrobial; anti-anglogenic; ophthalmological; meuroprotectant; anticonvulsant; noctropic; antialzheimers; antimution and vulnerary. The polyvuclectides and polypeptide cardient; cardination and vulnerary. The polyvuclectides and polypeptide expression. Disorders that may be prevented, diagnosed and/or treated by the above methods include immune clasorders (e.g. cancers and Gaucher's disease), hyperproliferative disorders (e.g. cancers and Gaucher's disease), cardiovascular diseases arteriosclerosis), anglogenic disorders (e.g. corneal graft neovasculariaation and diabetic rethnopathy, neurological disorders (e.g. Chorea, Alzheimer's disease and Parkinson's disease), infectious diseases and/or for promoting wound healing, regeneration and corners and cancers and Sacher's disease and Parkinson's disease; seed in the exemplification of the present invention.
                                                                                                                                                                                                                                      Nucleic acids encoding 49 human secreted polypeptides, useful for preventing, diagnosing and/or treating e.g. cancers, Parkinson's disease and diabetic retinopathy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     leucine-rich repeat; proteoglycan; cell regulatory factor; MBP;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Active fragments of decorin (full-length coding sequence AAQ50046) were generated by PCR and fused to Maltose Binding Protein. The resulting fusion proteins were useful for inhibiting the activity of a cell regulatory factor, esp. TGF-beta, and hence for treating conditions associated with over-activity of the growth factor such
                                                                                                                                    leucine-rich repeat; proteoglycan; cell regulatory factor; MBP; fusion protein; maltose binding protein; tumour growth; inhibition; decorin; PG-11; PG-40; transforming growth factor-beta; TGF-beta.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 45 kDa amino terminal tryptic fragment of glycocalicin and derivs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Active fragments of protein esp. decorin - with cell regulatory factor domain, useful for inhibiting cell regulatory factor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Key
conciding human secreted proteins (11). (1) and (11) are used to prevent, treat or amellorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. (1) and (11) may be used in the prevention, treatment and diagnosis of diseases associated with imappropriate expression of secreted proteins. (1) and complementary sequences may also be used as DNA probes in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples, and so which patients may be in need of restorative therapy. (11) may also be used as antigens in the production of antibodies and in assays to identify modulators (agonists and antagonists) of the expression and activity of the secreted proteins. The anti-(11) antibodies and antagonists may also be used to down requiate expression and activity of (11). The anti-(11) antibodies can an antagonists may also be used to down requiate expression and activity of (11). The anti-(11) antibodies can an antagonist assay (ELISA). The clisorders include for example: immunosorbant assay (ELISA). The and multiple sclerosis, cancers and hyperproliferative disorders (e.g. malanomas, neoplasms of the breast or liver, Sezary syndrome and activity of the state of an anti-(11) and anti-(11) an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Parkinson's disease and Charoct-Marie-Tooth disease), cardio-Cerebrovascular disorders (e.g. cardiac arrest, tachycardia, angina and thrombosis), infections caused by bacteria, viruses and fungl and ocular disorders (e.g. cardiac arrest, tachycardia, angina and cular disorders (e.g. corneal infections). (I) and (II), agonists, antagonists and antibodies can also be used to promote wound healing, maintain organs before transplantation, and support cell culture of primary tissues. AAU20342-AAU20666 represent human secreted protein amino acid sequences, and related sequences of the invention.

Note: The sequence data for this parent did not appear in the printed specification but was obtained in electronic format directly from WIPO at: ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                       New nucleic acids and polypeptides, useful for diagnosing, preventing or treating medical conditions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    invention relates to novel isolated nucleic acid molecules (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      seq_name: /SIDS1/gcgdata/geneseq/geneseqp-emb1/AA1993.DAT:AAR42266

  The claim is for a peptide of a 45kD amino terminal tryptic fragment of glycocalicin selected from the sequence which inhibits binding of von Willebrand factor to platelet membrane glycoprotein 1b and related molecules or other cells and cell matrices. Also claimed are a sequential subset of the above (Claim 2) and specific peptides (see FT) (Claim 3) with the same functions and any peptide of any sequential subset of and sequence (Claim 4). The peptides and derivs. prevent platelet aggregation and inhibit thrombosis.

Active fragments of decorin (full-length coding sequence AAQ50046) were generated by PCR and fused to Maltose Binding Protein. The resulting fusion proteins were useful for inhibiting the activity of a cell regulatory factor, esp. IGF-beta, and hance for treating conditions associated with over-activity of the growth factor such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          leucine-rich repeat, proteoglycan; cell regulatory factor; MBP; fusion protein; maltose binding protein; tumour growth; inhibition; decorin; PG-II; PG-40; transforming growth factor-beta; TGF-beta.

```
Active fragments of decorin (full-length coding sequence AAQ50046) were generated by PCR and fused to Maltose Binding Protein. The resulting fusion proteins were useful for inhibiting the activity of a cell regulatory factor, esp. TGF-beta, and hence for treating conditions associated with over-activity of the growth factor such as certain tumours.
                                                                                                                   Active fragments of protein esp. decorin - with cell regulatory factor domain, useful for inhibiting cell regulatory factor activity

Purificn. of human recombinant decorin – using a strong anion exchange resin, a hydrophobic interaction chromatography resin and a strong anion exchange resin
                                                                                                                                                                                                                                                            Human recombinant decorin (AAR89439) was obtd. by expression of a CDNA clone (AAT10741) in CHO host cells. Decorin (or PGII or PG-40) is a proteoglycan having a 40 kDa core protein. Recombinant decorin can be produced by cotransfection of CHO-DG44 cells with pSV2-decorin and pSV20AHT. Large-scale cultures can be performed using CHO cells attached to microcarrier beads. The recombinant protein is purified from the cells using a 3-step chromatographic procedure. It can be used for the highly sensitive detection of quantidinium ions (ppm range), partic. in protein-contg. solns. purified using GuHCl, and also has therapeutic applns.

Byochhetical protein 238 - Streptomyces griseus

Species: Streptomyces griseus
C;Species: S05572
R;Kobayashi, T.; Takao, M.; Oikawa, A.; Yasui, A.
Nucleic Acida Res. 17, 4731-474, 1989
A;Title: Molecular characterization of a gene encoding a photolyase from Streptomyces
A;Reference number: S05572; MUID:89315214
A;Accession: S05572; MUID:89315214
A;Accession: S05572
A;Molecule type: DNA
A;Residues: 1-238 < KOB>
A;Cross-references: EMBL:X15060; NID:947081; PIDN:CAA33160.1; PID:947082

C; Species: Caenorhabditis elegans
C; Species: Caenorhabditis elegans
C; Date: 29-Oct-1999 #sequence_revision 29-Oct-1999 #text_change 29-Oct-1999
C; Accession: T32012
R; Ledwith, J.; Wohldmann, P.; Rohlfing, T.
Submitted to the EMBL Data Library, July 1997
A; Description: The sequence of C. elegans cosmid K02F6.
A; Reference number: Z21112
A; Accession: T32012
A; Status: preliminary; translated from GB/EMBL/DDBJ
A; Status: preliminary;
A; Molecule type: DNA
A; Molecule type: DNA
A; Residues: 1-528 < LED>
A; Cross references: EMBL: AF016670; PIDN: AAB66108.1; GSPDB:GN00020; CESP: K02F6.7
